Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For claim 10, it is unclear which "said wheel" is being referred to in line 4, since plural wheels have been claimed previously.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 and 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tyus et al in view of Lim. Tyus teaches a container (Fig. 1) comprising a housing (20) with doors (30), a handle (52) for pushing or carrying and wheels (58). For claim 1, Tyus fails to teach the door structure claimed, i.e. a door having a sliding panel assembly and pivotal panel assembly combination and locking structure therefore. Lim teaches a door (10) having a sliding panel assembly (12) and pivotal panel assembly

Art Unit: 3637

(11) combination. The pivotal panel assembly includes tracks for receiving the sliding panel (23). Lim also teaches locking structure (32,34) that prevents the sliding panel from sliding out of the pivotal panel assembly (column 4, starting line 15) and structure (tracks 40/retaining device 41) that prevents the pivoting of the pivotal panel assembly when the sliding panel is not therein. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the container of Tyus by using an alternate type of door assembly thereon, i.e. using the door structure of Tyus therein instead of the individual doors presently used (using one or two combination structures as desired), since these door structures are functional equivalents and it appears that either type of door structure would work equally well on the container of Tyus. Furthermore, the door structure of Lim would allow more selective access into individual compartments inside the container of Tyus.

Allowable Subject Matter

Claims 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 14-21 are allowed. (The allowable subject matter being the specific locking structure between the slide and pivotal panel assemblies that prevents the sliding panel from sliding out of the pivotal panel assembly, i.e. the lock receiving structure on one of the arm structures of the pivoting panel assembly in combination

Art Unit: 3637

with the locking structure on one of the mounting members of the sliding panel assembly.)

Response to Arguments

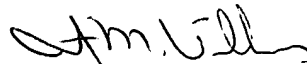

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
